

FOR A "WHITE GLOVE", TOP-TO-BOTTOM CLEAN, CHOOSE THESE ACCESSORIES FROM A & A MANUFACTURING

ECOSKIM

EcoSkim™—Imagine converting a mere 8–10 gallons of water from the pool pump into 50–70 gallons per minute of pure surface skimming power...all without any additional increase in pump suction or energy costs. That's exactly what EcoSkim's **venturi-powered design** delivers—twice the skimming of a traditional skimmer for an ultra-clean surface. Plus, it's the only skimmer with a patented anti-entrapment safety feature.

LeafVac™—The name will definitely fool you because LeafVac™ captures insects, twigs, stones, hair pins, and of course, leaves and other debris before it reaches your pump basket. This keeps your pump running at peak efficiency for longer. Its oversized basket extends time between filter cleanings. And when the clear, see-through basket fills with debris, its superior design assures that water continuously flows to the pump...so it doesn't run dry, extending service life.

AVSC™ and PDR²™ Main Drains—Whether you choose our large, 31" unblockable AVSC™ Main Drain or our smaller 10" PDR²™ Main Drain, you'll rest easy knowing that you've installed the only VGB Compliant Safety Drains engineered for heavy debris removal and certified by NSF International. What's more, when you combine the use of our main drains with EcoSkim and the QuikClean® Xtreme™ in-floor cleaning system, you will have installed the most powerful tandem of top-to-bottom cleaning products available today.

ABOUT A & A™ MANUFACTURING

When it comes to pool cleaning and safety products, A & A™ Manufacturing is a leading-edge developer of innovative, time-saving products that deliver what pool professionals and pool owners want most...a safe, meticulously clean pool that virtually takes care of itself. A & A has been doing so since 1982. Their wide array of products range from in-floor cleaning systems, safety drains, skimmers, in-wall cleaning jets, leaf canisters, water purification systems and more.

A & A manufactured products are a direct outgrowth of valued feedback from pool professionals and pool owners, intensive field research (not in a testing laboratory but in a backyard pool where the products are used and serviced) and experience gathered from their own pool building "roots". A & A Manufacturing is committed to **Enhancing People's Lives** by providing the very best, technologically advanced, eco-friendly products that deliver a pool experience second to none.

INTRODUCING

QUIKCLEAN
X
TREME™

ONLY ONE IN-FLOOR CLEANING SYSTEM DELIVERS

23% MORE POWER AND 33% WIDER COVERAGE

WITHOUT ANY INCREASE IN ENERGY COSTS

The revolutionary NEW QuikClean® Xtreme™ in-floor cleaning system is a pool owner's dream come true. It's the easiest, most effective way to enjoy a meticulously clean swimming pool without hardly lifting a finger. Not only does it clean more thoroughly and efficiently than other systems, it saves time and money too. Here's how:

QuikClean Xtreme consists of powerful, nearly invisible sets of cleaning heads that are strategically placed throughout the floor of your pool. A & A's system command center directs water to the sets of pop-up cleaning heads. What makes QuikClean so Xtreme is its unique, **venturi-powered head design**. It generates 23% more flow than other in-floor systems, creating super-charged streams of water that channel dirt and debris to the main drain and skimmer for fast removal... without any increase in pump power. Now that's what we call eco-friendly cleaning.

With its unprecedented cleaning radius, QuikClean Xtreme delivers 33% wider coverage than other outdated in-floor systems. This means fewer cleaning heads are required throughout the pool—so you'll pay less for a system that delivers more powerful, more thorough, and faster cleaning. That's more than just value, that's Xtreme value.

QUIKCLEAN® XTREME™

GOOD FOR YOUR POOL, GOOD FOR THE ENVIRONMENT
AND GREAT FOR YOUR WALLET

At the heart of every swimming pool is its circulation system. It's the key to maintaining a clean, healthy pool. Surprisingly, some builders are still constructing swimming pools the old-fashioned way—by returning all the clean, chemically treated water near the surface of the pool. This results in poor chemical disbursement, ineffective sanitization and the loss of heated water into the atmosphere.

Conventional System only circulates water at the surface

A&A Circulation System efficiently re-circulates sanitized, heated water evenly throughout the pool

QuikClean Xtreme does it right... by returning the filtered water to the advanced cleaning heads located on the pool floor. With its exclusive, **venturi-powered design**, circulation is optimized for maximum sanitizing effectiveness. Simultaneously, dirt and debris are swept to the main drain for instant removal, assuring ultra-clean, energy-efficient performance. In short, QuikClean Xtreme:

- Creates a cleaner, healthier pool by evenly circulating filtered water from the pool floor
- Reduces chemical usage by introducing filtered water at the pool bottom, decreasing chemical dissipation from the sun
- Significantly reduces energy usage when combined with money-saving, technologically superior variable speed pool pumps
- Saves on heating costs by disbursing heated water at the bottom of the pool, for even warming
- Is the most powerful, most thorough, and efficient in-floor cleaning system available today

- Cleaning heads deliver 23% more powerful flow without any increase in energy consumption, resulting in faster, more thorough and more cost-efficient cleaning
- 33% wider cleaning radius—requires fewer heads for lower initial system cost
- Evenly distributes filtered/heated water for more effective cleaning and sanitizing—lowers chemical and heating costs
- QuikClean Xtreme easily retrofits to many existing in-floor systems—owners of these competing brands can now enjoy the same superior QuikClean Xtreme technology
